List of Requirements and Features

1. **User Registration:** The system must allow creating profiles for mothers and babies through a Profile Manager feature.
2. **Pregnancy Tracking:** The system must calculate the current gestation week using a Gestation Calculator feature.
3. **Growth Status Validation:** The system must compare the baby's weight and height against medical standards to categorize their development as Normal, Alert, or Danger using a Pediatric Growth Validator feature.
4. **Medical Records:** The system must log appointments and vital signs using a Medical Check Recorder feature.
5. **Risk Leveling:** The system must categorize the health status of patients through a Risk Level Classifier feature.
6. **Community Interaction:** The system must provide a space for user questions through an Interactive Chat feature.
7. **Parenting Advice:** The system must offer educational tips through a Parenting Tips Repository feature.
8. **Search Tool:** The system must allow finding specific advice using a Keyword Search Engine feature.
9. **Data Storage:** The system must save all clinical updates through a Medical Database feature.
