

Summary of the movie Hidden Figures

The story opens by showing the childhood of Katherine Coleman, a young mathematics prodigy in Virginia. Years later, in 1961, Katherine is working at NASA's Langley Research Center alongside her close friends Dorothy Vaughan and Mary Jackson. The three women belong to the "human computers" division, a group of African American women who perform complex mathematical calculations by hand, completely segregated from the white employees in the West Area of the complex.

The Space Race against the Soviet Union is at its absolute peak. Due to the urgent pressure to put an American man into space, Al Harrison, the director of the Space Task Group, requests a computer who specializes in analytic geometry. Katherine is assigned to his team, becoming the first Black woman in that department. Meanwhile, Mary is assigned to the space capsule's heat shield team, and Dorothy continues to fight for an official promotion to supervisor, a role she is already performing but that her boss, Vivian Mitchell, denies her due to institutional racism.

Upon arriving at her new desk, Katherine faces a hostile and cold environment. Her white male colleagues, led by head engineer Paul Stafford, treat her with utter disdain. They assign her a separate, "colored" coffee pot and redact critical data from the reports she needs to calculate. Furthermore, because there are no segregated restrooms for Black women in that building, Katherine is forced to run half a mile back and forth across the campus everytime she needs to use the bathroom, costing her valuable work time.
